SCLS426C - OCTOBER 1998 - REVISED NOVEMBER 2002

 4.5-V to 5.5-V V_{CC} Operation 1.4-kΩ Pullup Resistors Integrated on All Open-Drain Outputs Eliminate the Need for Discrete Resistors 	DGG OR DL F (TOP VI) HD 1 A9 2	
 Designed for IEEE Std 1284-I (Level-1 Type) and IEEE Std 1284-II (Level-2 Type) Electrical Specifications 	A10 [3 A11 [4 A12 [5	46] Y10 45] Y11 44] Y12
 Flow-Through Architecture Optimizes PCB Layout 	A13 [6 V _{CC}] 7	43 Y13 42 V _{CC} CABLE
 Latch-Up Performance Exceeds 250 mA Per JEDEC 17 	A1 [] 8 A2 [] 9	41 B1 40 B2
 ESD Protection Exceeds JESD 22 4000-V Human-Body Model (A114-A) 200 V Machine Model (A415 A) 	GND [10 A3 [11 A4 [12	39 GND 38 B3 37 B4
 300-V Machine Model (A115-A) 2000-V Charged-Device Model (C101) 	A5 [] 13 A6 [] 14	36 B5 35 B6
description/ordering information	GND 🛛 15	34 GND
The SN74LV161284 is designed for 4.5-V to	A7 🛛 16 A8 🖓 17	33 B7 32 B8
5.5-V V _{CC} operation. This device provides asynchronous two-way communication between data buses. The control-function implementation	V _{CC} 18 PERI LOGIC IN 19	31 V _{CC} CABLE 30 PERI LOGIC OUT
minimizes external timing requirements.	A14 20 A15 21	29 C14 28 C15
This device has eight bidirectional bits; data can flow in the A-to-B direction when DIR is high, and	A16 22 A17 23	27 C16 26 C17

flow in the A-to-B direction when DIR is high, and in the B-to-A direction when DIR is low. This device also has five drivers, which drive the cable side, and four receivers. The SN74LV161284 has one receiver dedicated to the HOST LOGIC line and a driver to drive the PERI LOGIC line.

HOST LOGIC OUT [24 25] HOST LOGIC IN

The output drive mode is determined by the high-drive (HD) control pin. When HD is high, the B, Y, and PERI LOGIC OUT outputs are in a totem-pole configuration, and in an open-drain configuration when HD is low. This meets the drive requirements as specified in the IEEE Std 1284-I (level-1 type) and IEEE Std 1284-II (level-2 type) parallel peripheral-interface specifications. Except for HOST LOGIC IN and PERI LOGIC OUT, all cable-side pins have a 1.4-k Ω integrated pullup resistor. The pullup resistor is switched off if the associated output driver is in the low state or if the output voltage is above V_{CC} CABLE. If V_{CC} CABLE is off, PERI LOGIC OUT is set to low.

The device has two supply voltages. V_{CC} is designed for 4.5-V to 5.5-V operation. V_{CC} CABLE supplies the output buffers of the cable side only and is designed for 4.5-V to 5.5-V operation.

NOTES: A. The PMOS prevents backdriving current from the signal pins to V_{CC} CABLE when V_{CC} CABLE is open or at GND.
B. The PMOS prevents backdriving current from the signal pins to V_{CC} CABLE when V_{CC} CABLE is open or at GND. The PMOS is turned off when the associated driver is in the low state.

SCLS426C - OCTOBER 1998 - REVISED NOVEMBER 2002

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

Supply voltage range: V _{CC} CABLE
Input and output voltage range, V_I and V_O : Cable side (see Notes 1 and 2)
Peripheral side (see Note 1)–0.5 V to V _{CC} + 0.5 V
Input clamp current, I_{IK} (V _I < 0 or V _I > V _{CC}) ±20 mA
Output clamp current, I_{OK} ($V_O < 0$ or $V_O > V_{CC}$) ±50 mA
Continuous output current, $I_O (V_O = 0 \text{ to } V_{CC})$ ±50 mA
Continuous current through each V _{CC} or GND
Output high sink current, I_{SK} (V _O = 5.5 V and V _{CC} CABLE = 5.5 V)
Package thermal impedance, θ _{JA} (see Note 3): DGG package
DL package
Storage temperature range, T _{stg}

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

2. The ac input voltage pulse duration is limited to 40 ns if the amplitude is more negative than -0.5 V.

3. The package thermal impedance is calculated in accordance with JESD 51-7.

recommended operating conditions (see Note 4)

			MIN	MAX	UNIT

A-TO-B LOAD OR A-TO-Y LOAD (Open Drain)

NOTES: A. CL includes probe and jig capacitance.

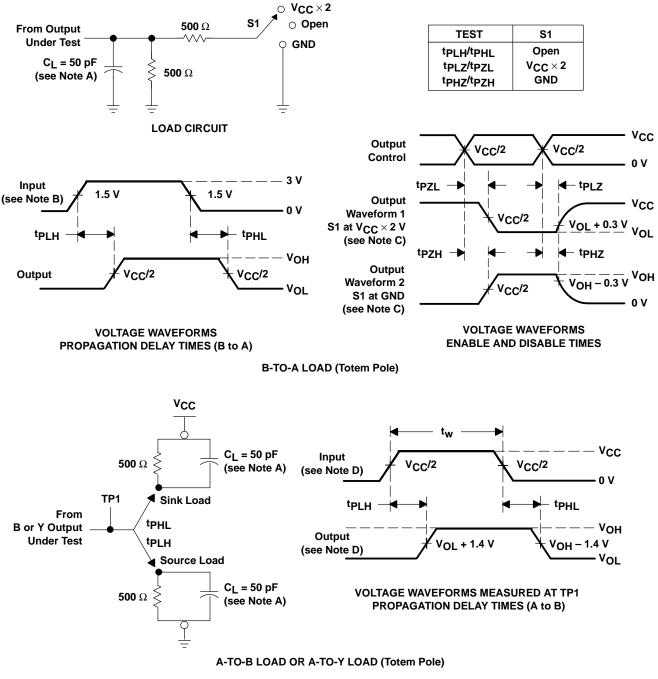

B. Input rise and fall times are 3 ns, 150 ns < pulse duration < 10 μs for both low-to-high and high-to-low transitions. Slew rate is measured between 0.4 V and 1.9 V for the rising edge and between 95% V_{CC} and 50% V_{CC} for the falling edge.

C. Input rise and fall times are 3 ns. Rise and fall times (open drain) < 120 ns.D. The outputs are measured one at a time with one transition per measurement.

Figure 1. Load Circuits and Voltage Waveforms

SCLS426C - OCTOBER 1998 - REVISED NOVEMBER 2002

PARAMETER MEASUREMENT INFORMATION

NOTES: A. CL includes probe and jig capacitance.

- B. Input rise and fall times are 3 ns.
- C. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- D. Input rise and fall times are 3 ns, 150 ns < pulse duration < 10 μ s for both low-to-high and high-to-low transitions.
- E. The outputs are measured one at a time with one transition per measurement.
- F. t_{PZL} and t_{PZH} are the same as t_{en} .
- G. tPLH and tPHL are the same as tpd.

SN74LV161284DLR	ACTIVE	SSOP	DL	48	1000	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 85	LV161284	Samples

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
