

LM759/LM77000 Power Operational Amplifiers

General Description

The LM759 and LM77000 are high performance operational amplifiers that feature high output current capability. The LM759 is capable of providing 325 mA and the LM77000 providing 250 mA. Both amplifiers feature small signal characteristics that are better than the LM741. The amplifiers are designed to operate from a single or dual power supply with an input common mode range that includes the negative supply. The high gain and high output power provide superior performance. Internal current limiting, thermal shutdown, and safe area compensation are employed making the LM759 and LM77000 essentially indestructible.

Features

- Output current
 - LM759—325 mA minimum
 - LM77000—250 mA minimum
- Internal short circuit current limiting
- Internal thermal overload protection
- Internal output transistors safe-area protection
- Input common mode voltage range includes ground or negative supply

Applications

- Voltage regulators
- Audio amplifiers
- Servo amplifiers
- Power drivers

Note 1: Although the internal power dissipation is limited, the junction temperature must be kept below the maximum specified temperature in order to meet data sheet specifications. To calculate the maximum junction temperature or heat sink required, use the thermal resistance values which follow the Equivalent Circuit Schematic.

Note 2: For a supply voltage less than 30V between V^+ and V^- , the absolute maximum input voltage is equal to the supply voltage.

Note 3: For military electrical specifications RETS759X are available for LM759H.

$$P_D \text{ Max} = \frac{T_{J \text{ Max}} - T_A}{\theta_{JC} + \theta_{CA}} \text{ or}$$

$$= \frac{T_{J \text{ Max}} - T_A}{\theta_{JA}} \text{ (without a heat sink)}$$

$$\theta_{CA} = \theta_{CS} + \theta_{SA}$$

Solving T_J :

$$T_J = T_A + P_D (\theta_{JC} + \theta_{CA}) \text{ or}$$

$$= T_A + P_D \theta_{JA} \text{ (without a heat sink)}$$

Where:

- T_J = Junction Temperature
- T_A = Ambient Temperature
- P_D = Power Dissipation
- θ_{JA} = Junction to ambient thermal resistance
- θ_{JC} = Junction to case thermal resistance
- θ_{CA} = Case to ambient thermal resistance
- θ_{CS} = Case to heat sink thermal resistance
- θ_{SA} = Heat sink to ambient thermal resistance

Mounting Hints

Metal Can Package (LM759CH/LM759MH)

The LM759 in the 8-Lead TO-99 metal can package must be used with a heat sink. With $\pm 15V$ power supplies, the LM759 can dissipate up to 540 mW in its quiescent (no load) state. This would result in a 100°C rise in chip temperature to 125°C (assuming a 25°C ambient temperature). In order to avoid this problem, it is advisable to use either a slip on or stud mount heat sink with this package. If a stud mount heat sink is used, it may be necessary to use insulating washers between the stud and the chassis because the case of the LM759 is internally connected to the negative power supply terminal.

Plastic Package (LM759CP/LM7700CP)

The LM759CP and LM7700CP are designed to be attached by the tab to a heat sink. This heat sink can be either one of the many heat sinks which are commercially available, a piece of metal such as the equipment chassis, or a suitable amount of copper foil as on a double sided PC board. The important thing to remember is that the negative power supply connection to the op amp must be made through the tab. Furthermore, adequate heat sinking must be provided to keep the chip temperature below 125°C under worst case load and ambient temperature conditions.
